Gastro

NO WITHDRAWAL PERIOD

This product is a new concept in the control and reduction of Equine Ulcers and related problems i.e. Colic

- Being a non PPI (Proton Pump Inhibitor) There is No interference or reduction of the stomachs ACID PUMP, absorption is sub-lingually (meaning under the tongue) which means this bypasses the digestion system/stomach in turn aiding a rapid response.
- The provision of anti-inflammatory ingredients to reduce the inflammation when tissue damage occurs, with the ingredient Nitric Oxide included, assists in the speeding up of the repair mechanism.
- It also has the effect of stimulating the production of saliva aided by the addition of sialagogues' (natural saliva stimulating agents) that help to naturally neutralise stomach acid that causes the majority of equine ulcers in the non-glandular area of the stomach
- Ulcers heal from the edge inwards through a process called Angiogenesis (new blood vessels form), this allows the flow of waste products from the injury to be removed and healing agents supplied along with oxygen. Platelets aid haemostasis (stopping bleeding and as a first stage of wound healing). They are initiated by formation of a 'healing zone', consisting of dilated glands, whose cells undergo de-differentiation, express epidermal growth factor receptor (EGF-R) and starts to actively proliferate, the NO molecules (Nitric Oxide) aids these processes.
- Contains natural antibiotics & agents supporting MUCOSAL integrity by active ingredients including Phytonutrients
- Suitable for horses of all ages i.e Foals, yearlings and adult horses
- Reduces damage to the COLONOCYTES by the bacterially produced ANIONIC SUPHIDES
- Works synergistically with the horse's own healing mechanisms in the maintenance of optimum digestion and contains natural stress reducers.
